

HWASHI WIRE MESH WELDING MACHINE CATALOGUE

This machine is our single head wire mesh row welding machine, effective welding range is LxW=1000X1000mm. It is equipped with automatic fixture, after manual loading wire into the fixture, the jig will automatic moving wire mesh into welding position.

Reference quotation:

FOB Shenzhen USD 15000-25000

Suitable welding wire diameter: 2-6mm (can be customized)

Exactly price will be influenced by your products. The size, wire diameter and etc.

WL-CNC-MF90K

WL-CNC-AC150K

Description

This machine is designed as single-electrode long arm type row welder with X, Y axis automatic mobile feeder. The operator only needs to input the parameters like the coordinate data and welding current, then the machine will conduct automatic welding after start. Workers only need to put and take the work piece manually. Both normal AC pulse power supply system and energy saving type medium frequency inverter power supply system are available.

Features

This machine is of simple structure which will make the assembly very easy. It also can be matched with different welding equipment. The servo motor will drive the X and Y axis to run within the preset PLC programming. It can max store 5000 welding spots and 32 sets of different welding models. This machine is suitable for batch welding of wire mesh, reinforced door panel, air conditioning backplane, etc.

Application

Suitable for batch production of wire mesh, sheet metal and hardware parts.
